Project Abstracts 2022-23	
1.Department: CSE	
2.Year:2023	3.Semester: 8
4. Student Name	Sabin Kandel
5. USN	1NT19CS165
6. Name of the Guide	Dr. Nalini N
7. Domain	Machine Learning / Deep Learning
8. Title/Topic of the Project	Detection of Malaria in Blood Cells Using Convolution Neural Network
9. Abstract (Not more than 100-150words)	
Malarial infection in the blood cells is diagnosed by manually counting the number of parasites, RBCs and WBCs in the blood sample taken and our application is a system that enables users to take images of the blood sample and uses image segmentation and advanced deep learning techniques and diagnose malarial infection in the sample. In addition diagnosis delays could be critical since some countries lack essential medical resources capable of taking fast action against disease outbreaks; hence the need for an effective solution like our mobile application which integrates a low cost microscope like a foldscope which is a pocket microscope costing about a dollar with our machine learning model to give fast and accurate diagnosis.	
10. Objectives	- To help medical professionals expedite diagnosis by automatically counting the parasites in the blood sample. - Create a responsive application that can efficiently process images from a foldscope and provide real-time analysis and prediction of malaria parasites in blood samples. - Reduce the computational complexity of the model to ensure that the application can be used with devices of lowest specifications and can be used offline. - Provide health professionals in rural areas with an improved diagnostic tool that can help save lives by accurately detecting the presence of malaria parasites in blood samples.

Department of Computer Science and Engineering

11. Deliverables	• Android App • WebApp • Deep Learning Model to Detect the Parasite		
<u>12. Status of the Project (Kindly provide correct status of the project)</u>			
a. Publication Status	Being Published	b. Productized	No
		c. Patent Filed	NO
d. Plagiarism Check	8% Similarity	e. Best project status Describe	Complete
